PROFILE

Full Stack Developer working with the MERN stack. I learned to code by solving real problems: I built and maintain the digital infrastructure of the business I work for, from a 3,900+ product catalog with a full admin panel to a PWA connected to the company's SQL Server management system, now used daily by warehouse staff. Experience across the full cycle: REST APIs, data modeling, authentication, image optimization and production deployment. Currently in the 2nd year of a Programming Technical Degree (UTN) and completing a Back-End Developer certification at DigitalHouse. Looking to join a development team as a full-time employee.

EXPERIENCE

Full Stack Developer | Refrigeración A&P *2024 – Present*

- refrigeracionayp.com — Online catalog of 3,900+ products with technician sign-up, WhatsApp orders with server-side price calculation and an admin panel. Typo-tolerant search (Damerau-Levenshtein) that understands the accounting system's abbreviations; SEO with server-rendered pages (3,889 pages discovered by Google); 180+ automated tests. Fixed Excel import timeouts with bulkWrite in batches of 500. Stack: React + Vite (Vercel), Express + Mongoose + MongoDB Atlas (Railway), WebP images with sharp on Cloudflare R2.
- Stock control PWA — App for sales and warehouse staff, connected to the management system's SQL Server database without changing its tables: stock adjustments with undo, goods receiving, transfers between two warehouses, shortage lists and thermal-printer labels. Before, the whole team depended on 4 computers. Stack: Node.js, Express, mssql, PWA, PDFKit, ExcelJS.
- Built the company's first online catalog: cart with WhatsApp ordering, USD prices converted at the current exchange rate, installation kits and an admin panel with Excel import. Stack: React + Vite (Vercel), Express 5 + MongoDB.
- Gathered requirements from internal users, developed, deployed and maintained all systems end to end.

Customer Service | Refrigeración A&P *12/2021 – Present*

- Managed shipping and order tracking; handled purchasing from distributors to restock inventory.
- Researched and analyzed competitors in the refrigeration market.

Skilled Machine Operator | Pack Tango *08/2018 – 01/2019*

- Operated and programmed CNC machinery for parts manufacturing; quality control and precision adjustments.

OTHER PROJECTS

Community business directory — MERN
Full stack application with an admin panel: JWT authentication, image gallery with Cloudinary, interactive maps with Leaflet and category filtering. React + Vite · Express + Mongoose · MongoDB Atlas.

Financial instrument tracking platform — Personal project
Automated screener and configurable alert system for stocks and CEDEARs. Node.js · Express · MongoDB · React + Vite · JWT.

TECHNICAL STACK

Frontend: React, Vite, JavaScript, HTML5, CSS3, TailwindCSS, React Router, PWA
Backend: Node.js, Express, MongoDB, Mongoose, SQL Server (mssql), REST APIs, JWT
Infra & tools: Git, GitHub, Vercel, Railway, MongoDB Atlas, Cloudflare R2, Cloudinary, Postman
Learning: TypeScript

EDUCATION

Programming Technical Degree — Universidad Tecnológica Nacional (UTN) · 2nd year, in progress
Back-End Developer Certification — DigitalHouse · In progress
Back-End / React / JavaScript — Coderhouse · Completed (2024 / 2023 / 2023)
Technical High School Diploma — Escuela de Educación Secundaria Técnica N°2 · 2017

LANGUAGES & AVAILABILITY

Languages: Spanish (native) · English B1
Availability: Full time · On-site, remote or hybrid
